

AP[®] Physics C: Electricity and Magnetism 2009 Free-Response Questions

The College Board

The College Board is a not-for-profit membership association whose mission is to connect students to college success and opportunity. Founded in 1900, the association is composed of more than 5,600 schools, colleges, universities and other educational organizations. Each year, the College Board serves seven million students and their parents, 23,000 high schools and 3,800 colleges through major programs and services in college readiness, college admissions, guidance, assessment, financial aid, enrollment, and teaching and learning. Among its best-known programs are the SAT®, the PSAT/NMSQT® and the Advanced Placement Program® (AP®). The College Board is committed to the principles of excellence and equity, and that commitment is embodied in all of its programs, services, activities and concerns.

TABLE OF INFORMATION FOR 2008 and 2009

CONSTANTS AND CONVERSION FACTORS

Proton mass, $m_p = 1.67 \times 10^{-27} \text{ kg}$

Neutron mass, $m_n = 1.67 \times 10^{-27} \text{ kg}$

Electron mass, $m_e = 9.11 \times 10^{-31} \text{ kg}$

Avogadro's number, $N_0 = 6.02 \times 10^{23} \text{ mol}^{-1}$

Universal gas constant, $R = 8.31 \text{ J/(mol \cdot K)}$

Boltzmann's constant, $k_B = 1.38 \times 10^{-23} \text{ J/K}$

 $e = 1.60 \times 10^{-19} \text{ C}$ Electron charge magnitude,

1 electron volt, $1 \text{ eV} = 1.60 \times 10^{-19} \text{ J}$

 $c = 3.00 \times 10^8 \text{ m/s}$ Speed of light,

Universal gravitational

 $G = 6.67 \times 10^{-11} \text{ m}^3/\text{kg} \cdot \text{s}^2$ constant,

Acceleration due to gravity $g = 9.8 \text{ m/s}^2$

at Earth's surface,

1 unified atomic mass unit,

 $1 \text{ u} = 1.66 \times 10^{-27} \text{ kg} = 931 \text{ MeV}/c^2$

Planck's constant,

 $h = 6.63 \times 10^{-34} \text{ J} \cdot \text{s} = 4.14 \times 10^{-15} \text{ eV} \cdot \text{s}$

 $hc = 1.99 \times 10^{-25} \text{ J} \cdot \text{m} = 1.24 \times 10^3 \text{ eV} \cdot \text{nm}$

Vacuum permittivity,

 $\epsilon_0 = 8.85 \times 10^{-12} \,\mathrm{C}^2/\mathrm{N} \cdot \mathrm{m}^2$ Coulomb's law constant, $k = 1/4\pi\epsilon_0 = 9.0 \times 10^9 \text{ N} \cdot \text{m}^2/\text{C}^2$

Vacuum permeability,

 $\mu_0 = 4\pi \times 10^{-7} \text{ (T-m)/A}$

Magnetic constant, $k' = \mu_0/4\pi = 10^{-7} \text{ (T-m)/A}$

1 atmosphere pressure,

 $1 \text{ atm} = 1.0 \times 10^5 \text{ N/m}^2 = 1.0 \times 10^5 \text{ Pa}$

	meter,	m	mole,	mol	watt,	W	farad,	F
LINIT	kilogram,	kg	hertz,	Hz	coulomb,	C	tesla,	T
UNIT SYMBOLS	second,	S	newton,	N	volt,	V	degree Celsius,	°C
STWIDOLS	ampere,	A	pascal,	Pa	ohm,	Ω	electron-volt,	eV
	kelvin,	K	joule,	J	henry,	Н		

PREFIXES						
Factor	Prefix	Symbol				
10 ⁹	giga	G				
10 ⁶	mega	M				
10 ³	kilo	k				
10^{-2}	centi	c				
10^{-3}	milli	m				
10^{-6}	micro	μ				
10^{-9}	nano	n				
10^{-12}	pico	p				

VALUES OF TRIGONOMETRIC FUNCTIONS FOR COMMON ANGLES							
θ	0°	30°	37°	45°	53°	60°	90°
$\sin \theta$	0	1/2	3/5	$\sqrt{2}/2$	4/5	$\sqrt{3}/2$	1
$\cos \theta$	1	$\sqrt{3}/2$	4/5	$\sqrt{2}/2$	3/5	1/2	0
$\tan \theta$	0	$\sqrt{3}/3$	3/4	1	4/3	$\sqrt{3}$	∞

The following conventions are used in this exam.

- I. Unless otherwise stated, the frame of reference of any problem is assumed to be inertial.
- II. The direction of any electric current is the direction of flow of positive charge (conventional current).
- III. For any isolated electric charge, the electric potential is defined as zero at an infinite distance from the charge.

$$\int \frac{dx}{x} = \ln|x|$$

$$\int \cos x \, dx = \sin x$$

$$\int \sin x \, dx = -\cos x$$

PHYSICS C: ELECTRICITY AND MAGNETISM

SECTION II Time—45 minutes

3 Questions

Directions: Answer all three questions. The suggested time is about 15 minutes for answering each of the questions, which are worth 15 points each. The parts within a question may not have equal weight. Show all your work in this booklet in the spaces provided after each part, NOT in the green insert.

E&M. 1.

A spherically symmetric charge distribution has net positive charge Q_0 distributed within a radius of R. Its electric potential V as a function of the distance r from the center of the sphere is given by the following.

$$V(r) = \frac{Q_0}{4\pi\epsilon_0 R} \left[-2 + 3\left(\frac{r}{R}\right)^2 \right] \text{ for } r < R$$

$$V(r) = \frac{Q_0}{4\pi\epsilon_0 r} \text{ for } r > R$$

Express all algebraic answers in terms of the given quantities and fundamental constants.

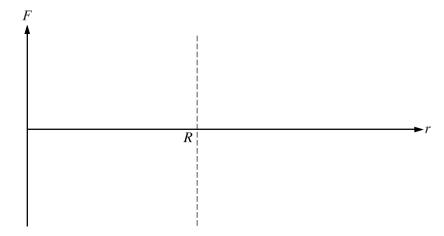

(a)	For the following regions, indicate the direction of the electric field $E(r)$ and derive an expression for its magnitude.
	i. $r < R$
	Radially inward Radially outward
	ii. $r > R$
	Radially inward Radially outward
(b)	For the following regions, derive an expression for the enclosed charge that generates the electric field in that region, expressed as a function of r .
	i. $r < R$
	ii. $r > R$

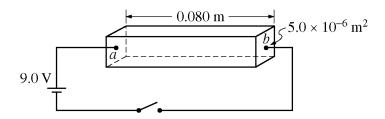

____Yes ____No

(c) Is there any charge on the surface of the sphere (r = R)?

If there is, determine the charge. In either case, explain your reasoning.

(d) On the axes below, sketch a graph of the force that would act on a positive test charge in the regions r < R and r > R. Assume that a force directed radially outward is positive.

E&M. 2.

A 9.0 V battery is connected to a rectangular bar of length 0.080 m, uniform cross-sectional area 5.0×10^{-6} m², and resistivity 4.5×10^{-4} Ω •m, as shown above. Electrons are the sole charge carriers in the bar. The wires have negligible resistance. The switch in the circuit is closed at time t = 0.

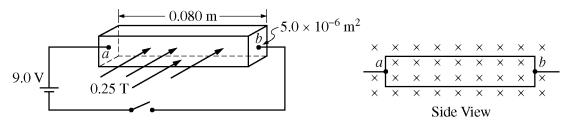

- (a) Calculate the power delivered to the circuit by the battery.
- (b) On the diagram below, indicate the direction of the electric field in the bar.

Explain your answer.

(c) Calculate the strength of the electric field in the bar.

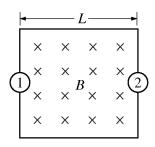

A uniform magnetic field of magnitude 0.25 T perpendicular to the bar is added to the region around the bar, as shown below.

- (d) Calculate the magnetic force on the bar.
- (e) The electrons moving through the bar are initially deflected by the external magnetic field. On the diagram below, indicate the direction of the additional electric field that is created in the bar by the deflected electrons.

(f) The electrons eventually experience no deflection and move through the bar at an average speed of 3.5×10^{-3} m/s. Calculate the strength of the additional electric field indicated in part (e).

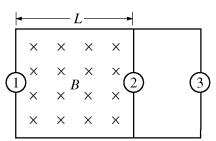

E&M. 3.

A square conducting loop of side L contains two identical lightbulbs, 1 and 2, as shown above. There is a magnetic field directed into the page in the region inside the loop with magnitude as a function of time t given by B(t) = at + b, where a and b are positive constants. The lightbulbs each have constant resistance R_0 . Express all answers in terms of the given quantities and fundamental constants.

- (a) Derive an expression for the magnitude of the emf generated in the loop.
- (b) i. Determine an expression for the current through bulb 2.
 - ii. Indicate on the diagram above the direction of the current through bulb 2.
- (c) Derive an expression for the power dissipated in bulb 1.

Another identical bulb 3 is now connected in parallel with bulb 2, but it is entirely outside the magnetic field, as shown below.

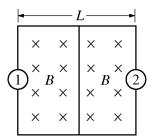

(d)	How does the	brightness of	of bulb 1	compare to	what it was	in the prev	ious circuit?
(u)	110 w does the	originaless (of build i	compare to	what it was	in the prev	ious circuit:

____ Brighter ____ Dimmer ____ The same

Justify your answer.

Now the portion of the circuit containing bulb 3 is removed, and a wire is added to connect the midpoints of the top and bottom of the original loop, as shown below.

(e)	How does the brightness of bulb 1 compare to what it was in the first circu						
	Brighter	Dimmer	The same				
	Justify your ans	wer.
